# Automatic Eco Lamb Feeder

## A strong start with Eco

Automatic feeders from Förster-Technic have proven themselves worldwide in the raising of lambs and kids. They provide low-labour feeding and ensure the healthy growth of animals.

The automatic lamb feeders from Förster-Technic are extremely cost-effective and affordable. With only one device you can feed up to 240 lambs reliably and safely. The machines are very robust, since many of the components are based on Förster calf feeder technology, which has been tried and tested countless times over. At the same time the automatic lamb feeders are adjusted to the individual needs of your young animals.

### Ad-lib machines – feeding until full!

Lambs can drink at any time. The feed, which consists of water and ewe milk replacer e.g. Volac Lamb Milk Replacer, is prepared warm and fresh in small portions, it is intensively mixed in the heated mix bowl assembly. The water remains at the selected temperature, thanks to the special built-in boiler.

### Ready steady drink!

Ensures the rapid & healthy growth of animals. The machine has 8 outlets that can be adapted to accommodate up to 16 teats which can feed up to 240 lambs at approximately 15 lambs per teat.

### Operations made easy

The automatic feeder can be easily and intuitively operated thanks to its compact control unit and the 7-segment display. With the clearly laid out function menu, the water and the milk powder portion size can be configured separately with the easy to use control panel. A portion counter allows you to easily monitor the amount of feed being dispensed.

## Reliably at the right temperature

The boiler, which has a temperature sensor, an electronic heating regulator and a minimum temperature monitor, ensures that the milk feed is always at the correct temperature, and can easily be configured and checked. The machine is equipped with a mixer heating unit which keeps the milk in the mixer warm over a long period of time. This way your lambs always receive feed at a constant temperature. This is especially important for goat kids who do not really like to drink cooled down milk.

## Easy cleaning

The semi-automatic mixer cleaning system is efficient and easy to operate. At the press of a button you have instant hot water for cleaning.

## Fly protector

The fine mesh screen which covers the mixer prevents flies from getting into the mixed milk. Steam and condensation build up can easily escape from the large chamber through the mesh.

### Technical data

#### Dimensions

- Height 114cm
- Width 58cm
- Depth 52cm
- Weight approx 34kg

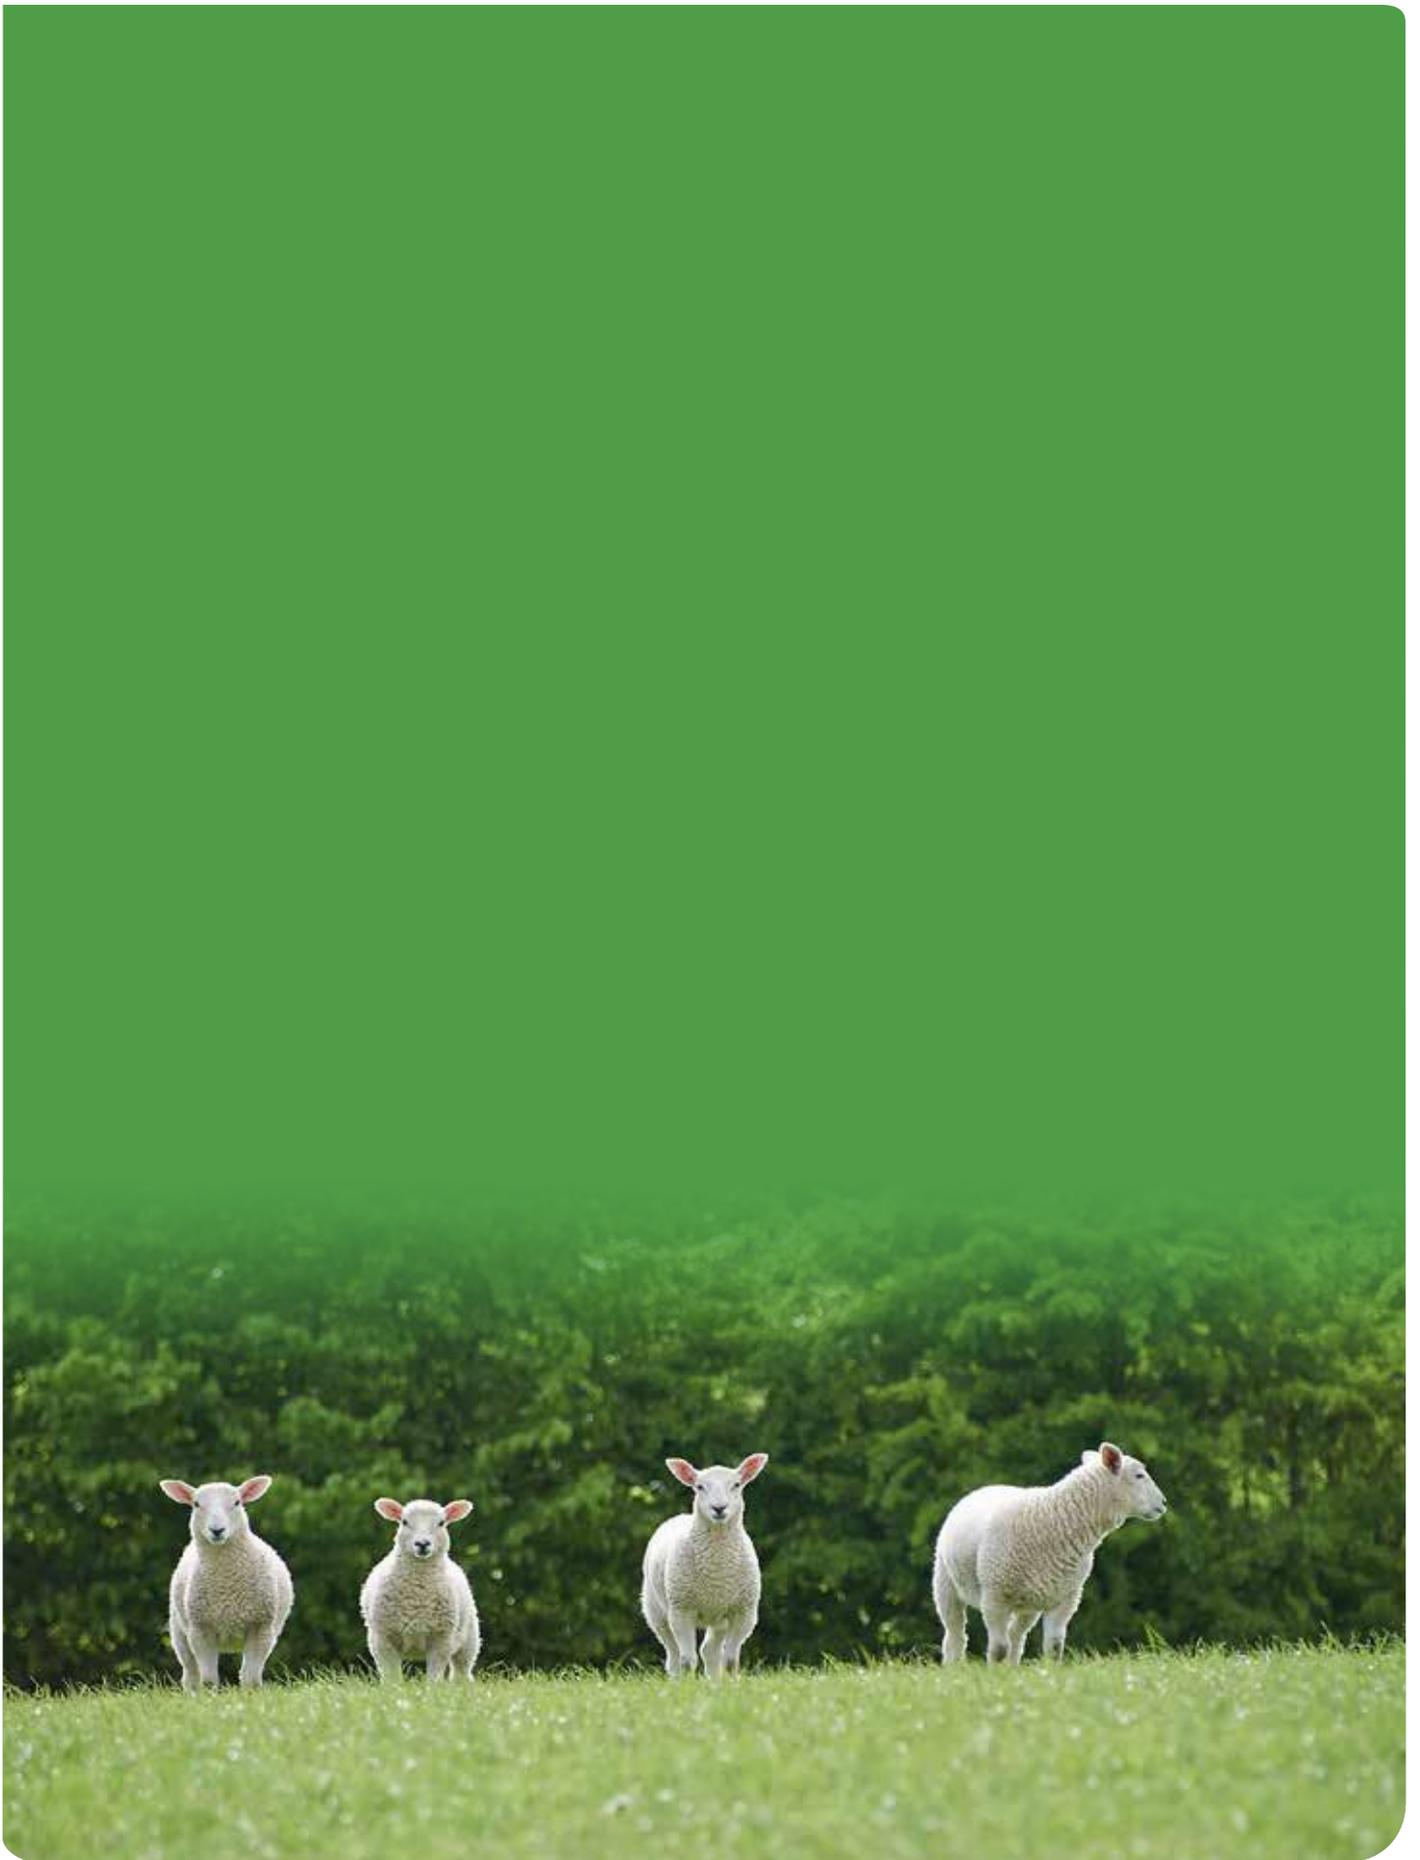

#### Standard equipment

- Fly protection
- Mixer heating
- Electronic heating regulation

#### Required

- 16 amp
- Mains water supply
